

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claims 1-14 (cancelled)

15. (Currently Amended) A server for use in a vehicle including a first wireless interface providing a connection on a customer basis, for local user terminals to the server, to enable access to local content on the server, [[and]] a second wireless interface providing a connection to an external mobile network[[]], to enable access to remote content on remote servers, and a third wireless interface for providing a broadband connection[[,]] to an external network[[,]] to enable access to remote content on remote servers, wherein if access to a remote server is requested, the server first attempts to connect to the remote server via the third wireless interface, and if the third wireless interface cannot establish a connection with the remote server, the server attempts to connect to the remote server via the second wireless interface.

16. (Previously Presented) A server as in claim 15, comprising detection means for determining a presence of an external network capable of making a broadband connection with the third wireless interface.

17. (Previously Presented) A server as in claim 16, comprising access control means, responsive to the detection means, for determining utilization of the second and third interfaces.

18. (Previously Presented) A server as in claim 17, comprising content update means for updating the local content on the server via the third wireless interface.

19. (Previously Presented) A server as claimed in claim 15 comprising a computer programmed to operate as a world wide web server and including first and second network data adapters providing the first and second wireless interfaces, respectively.

20. (Previously Presented) A server as claimed in claim 19, wherein a third network data adapter provides the third wireless interface.

21. (Currently Amended) ~~A method of providing content using a server, which is installed in a vehicle, including a first wireless interface providing a connection to local customer terminals and a second wireless interface providing a connection to an external mobile network, the method~~ The method of claim 27, further comprising providing content located locally in the server and content located in [[a]] the remote server and accessed by the second wireless interface, updating the local content via [[a]] the third wireless interface capable of making a broadband connection with an external network, wherein the local and remote content are accessible by [[a]] local ~~customer's terminal~~ customer terminals via the first wireless interface.

22. (Previously Presented) A method as claimed in claim 21, comprising restricting access by the local customer's terminal to content on remote servers.

23. (Currently Amended) A method as claimed in claim ~~[[21]]~~ 27, generating revenue by charging third party companies for storing content locally.

24. (Previously Presented) A method as claimed in claim 23, wherein the server provides an internet portal to the customers, wherein the method comprises charging a premium to third party companies for links to content stored locally, compared to charges, if any, for links to content stored remotely.

25. (Withdrawn) A system for providing content, comprising:

a service controller server connected to the internet;

a local server, mounted in a vehicle, and user terminals, wherein the local server is a server as claimed in claim 15 and the user terminals and the local server communicate on a customer basis over a first communication protocol, and the server and the service controller server communicate over a second cellular-system communication protocol, whereby the user terminals can access the local server, and by an internet connection of the local server, remote servers.

26. (Withdrawn) A system for providing content, comprising:

a core network comprising a plurality of fixed nodes;

a plurality of local servers, storing local content, wherein at least one local server is a server as claimed in claim 15;

a plurality of user terminals which can access the local server; and wherein

the local servers and the fixed nodes are programmed to operate as a dynamically re-routing mesh or ad-hoc wireless network to facilitate access by the local servers to the core network and then other networks, external to the core network.

27. (New) A method of providing content using a server, which is installed in a vehicle, including a first wireless interface providing a connection to local customer terminals and a second and third wireless interfaces providing a connection to an external mobile network, comprising:

receiving a request via the first wireless interface from a local customer terminal to access a remote server;

attempting to establish a connection with the remote server via the third interface;

if the third interface establishes a connection with the remote server, permitting the local customer terminal to access the remote server; and

if the third interface is unable to establish a connection with the remote server, attempting to establish a connection with the remote server via the second interface.

28. (New) The method of claim 27, wherein the third wireless interface comprises a broadband interface.

29. (New) The method of claim 27, wherein the third wireless interface comprises a Hiperlan Wireless LAN interface.

30. (New) The method of claim 27, wherein the first wireless interface comprises a Bluetooth interface.

31. (New) The method of claim 27, wherein the second wireless interface comprises a WCDMA interface.

32. (New) The server of claim 15, wherein the first wireless interface comprises a Bluetooth interface.

33. (New) The server of claim 15, wherein the second wireless interface comprises a WCDMA interface.

34. (New) The server of claim 15, wherein the third wireless interface comprises a Hiperlan Wireless LAN interface.
